The Jaegar Searcher HD is a high performance, multi sensor platform which utilises long range cooled MWIR HD thermal sensors with a range of zoom lens options up to 100-1200mm, alongside the latest low light HD visible sensor with zoom lens options up to 20-2400mm . The Searcher HD employs the latest 10 $\mu$ m thermal technology which has push autofocus and image stabilisation capabilities as standard.

Combining advanced motor drive technology along with harmonic drive gears, all Jaegar camera platforms are able to position our longest-range sensors accurately and quickly. The Jaegar benefits from a fixed through shaft, which can enable payloads such as a RADAR to be mounted directly above the PT director.

The Jaegar's ruggedised design allows a high level of environment protection which is suitable for the most extreme and challenging environments.
